

SMART Saddle Launch

The new generation dressage saddle that performs better for both horse and rider

Through years of research, *Solution Saddles*, the market leader in treeless saddles, have developed their most technologically advanced saddle model to date. September 2009 sees the launch of the SMART saddle at Burghley International Horse Trials.

The SMART saddle has been created with the use of computer aided designs. The revolutionary process of 3D scanned surface modelling gives precision and symmetry. State of the art prototyping technologies, using computer numerical controlled machines, produce tooled weight bearing panels that allow **maximum range of back and shoulder movement**.

SMART features include:

- High density floating fins, which are built in to support the weight and movement of the rider.
- A precision moulded shock absorbing seat, providing unparalleled depth and feel.
- The new W girth system, which moves with the horse's back action, allows freedom of movement and accommodates even the most difficult conformation comfortably.
- Classic traditional style.

The SMART saddle is available for test riding from mid-July and for sale from September 2009.

The price is £1950.00 inc. VAT and is also available on a 0% finance option.
